Chapter 6: Human Resources

This chapter covers all employee and workforce management functions in Ledger DR: maintaining employee records, processing timesheets, managing benefits and loans, recording vacations, tracking incidents, running payroll, and maintaining the day-worker registry.

Who can access HR?

Admin and Management roles have full read/write access to all HR data including salaries, loans, and payroll snapshots.

Accountants can view employee profiles, benefits, vacations, documents, and payroll snapshots, and have full access to timesheets.

Supervisors can view the employee list and the jornalero registry only.

Viewers have no access to HR data.

6.1 HR Module Map

The HR section is accessible from the left-hand navigation menu. It contains the following sub-modules:

Sub-module	Purpose
Employees	Permanent employee profiles, salaries, bank details, and uniform sizes
Timesheets	Daily attendance and hours worked per employee per payroll period
Benefits	Recurring and one-time allowances assigned to each employee
Loans	Employee salary advances with installment repayment tracking
Vacations	Approved vacation periods by employee
Incidents	Disciplinary events, accidents, or other HR incidents
Salary History	Full record of salary changes over time per employee
Documents	ID scans, contracts, and other uploaded files per employee
Payroll Periods	Bi-monthly payroll periods with open/closed status
Payroll	Payroll computation and snapshot generation for each period
Jornaleros	Day-worker registry with cédula and active status

6.2 Employee Records

6.2.1 The Employee List

Navigate to HR > Employees. The list shows all 15 employees (13 active, 2 inactive) with their name, position, salary, and hire date. Use the Active / Inactive filter to toggle visibility of terminated employees.

Current positions in the system:

Position	Count
Servicios Generales	6
Tractorista	3
Gerencia	2
Supervisor	2
Volteador	1
Sereno	1

6.2.2 Creating a New Employee

Navigate to HR > Employees > + New Employee.

Field	Required?	Description
Full Name	Required	Employee's full legal name as it appears on their cédula.
Cédula	Required	Dominican national ID number. Must be unique — the system rejects duplicates.
Position	Required	Job title or role. Free text (e.g., Tractorista, Supervisor, Servicios Generales).
Date of Hire	Required	The official start date. Used to calculate seniority and vacation entitlement.
Salary	Required	Base bi-monthly salary in DOP. This is the salary for one pay period (half-month), not the annual figure.
Date of Birth	Optional	Used for age verification and TSS calculations.
Bank	Optional	Currently all employees use Banco BHD León. Select from the dropdown.
Bank Account Number	Optional	Full account number for direct deposit reference.
Shirt Size	Optional	Uniform sizing for requisition purposes.
Pant Size	Optional	Uniform sizing for requisition purposes.
Boot Size	Optional	Uniform sizing for requisition purposes.

Salary field is per pay period, not annual

The salary stored is the amount paid per bi-monthly period (approximately every 15 days). For an employee earning RD$42,000 per month, the salary field should be RD$21,000. Always confirm whether a quoted salary is monthly or per-period before entering it.

6.2.3 Editing an Employee Record

Open any employee from the list and click the edit icon. All fields except Cédula can be modified. Changing the Salary field here updates the current salary but does not automatically create a salary history record — you must add that manually (see Section 6.7).

6.2.4 Deactivating an Employee

To mark an employee as terminated, open their record and toggle the Active switch to inactive. Enter the Date of Termination when prompted. Inactive employees:

- No longer appear in the default employee list (use the Inactive filter to view them).
- No longer appear in the timesheet entry dropdown.
- Remain in the database and in all historical payroll records.
- Can be reactivated by an administrator if needed.

⚠ Do not delete employees

Deleting an employee record would orphan all associated timesheets, payroll snapshots, loans, and history. Always deactivate rather than delete. If you see a Delete option, do not use it.

6.3 Timesheets

Timesheets track daily attendance and hours worked for each permanent employee within a payroll period. They are the primary input for payroll calculation.

6.3.1 Navigating Timesheets

Navigate to HR > Timesheets. Select a payroll period from the dropdown at the top. The view shows a grid with employees as rows and dates as columns. Each cell shows hours worked, an absence marker, or a holiday marker.

6.3.2 Recording a Timesheet Entry

Click on any cell in the grid to create or edit an entry for that employee and date.

Field	Required?	Description
Work Date	Auto	Filled from the cell you clicked.
Start Time	Recommended	Time the employee began work (e.g., 07:30). Used to auto-calculate hours worked.
End Time	Recommended	Time the employee finished work (e.g., 16:30).
Hours Worked	Required	Total hours for the day. Auto-calculated from start/end times if both provided. Normal shift = 8–9 hours.
Is Absent	Optional	Check if the employee did not report to work. Sets hours to 0 and triggers an absence deduction in payroll.
Is Holiday	Optional	Check if this date is a public holiday. Triggers holiday pay premium in payroll.
Notes	Optional	Any relevant observation (e.g., medical leave, late arrival, early departure).

⚠ Negative hours detected in the data

The system currently contains timesheet entries with negative hours_worked values (as low as −14 hours). This is likely due to end times being entered before start times, or manual overrides with incorrect signs. Always verify the hours field after entering start and end times. Entries with negative hours will cause incorrect payroll calculations.

Timesheet and the Cronograma

The Cronograma shows what each employee was scheduled to do. The Timesheet records what they actually worked. Both must be kept in sync — mark Is Holiday and Is Vacation in both the Cronograma and the Timesheet for each affected date.

6.3.3 Bulk Timesheet Entry

For days when all employees worked standard hours, use the Fill Standard Day button at the top of the timesheet grid. This populates all empty cells for the selected date with 07:30 start, 16:30 end, and 9 hours worked. Edit individual cells for exceptions.

6.4 Benefits

Benefits are recurring or one-time allowances paid to employees in addition to their base salary. They are added to gross pay before deductions.

6.4.1 Benefit Types

Three benefit types are currently in use:

Benefit Type	Description
Gasolina	Monthly fuel allowance (typically RD$5,000). Assigned to 4 employees.
Teléfono	Monthly phone allowance. Assigned to 9 employees.
Bono	One-time or periodic bonus. Assigned to 5 employees.

6.4.2 Adding a Benefit

Navigate to HR > Employees > select employee > Benefits tab > + Add Benefit.

Field	Required?	Description
Benefit Type	Required	Select from the existing types or type a new one. New types are created on the fly.
Amount	Required	The benefit amount in DOP per pay period.
Is Recurring	Required	Toggle on if this benefit applies every period. Toggle off for one-time bonuses.

Period-level benefit overrides

For a given payroll period, you can override the benefit amount for a specific employee without changing their recurring benefit record. This is done from the payroll period view (Section 6.9). Use this for month-specific variations (e.g., a larger Christmas bonus in December).

6.5 Loans

The Loans sub-module tracks salary advances repaid in installments through payroll deductions.

6.5.1 Recording a Loan

Navigate to HR > Employees > select employee > Loans tab > + New Loan.

Field	Required?	Description
Loan Date	Required	The date the advance was issued.
Loan Amount	Required	The total amount lent in DOP.
Number of Payments	Required	How many pay periods the repayment is spread over.

Field	Required?	Description
Payment Amount	Required	The fixed deduction per pay period.
Remaining Payments	Required	The number of installments still outstanding. Set this correctly if entering a partially-repaid loan.
Notes	Recommended	Document the original loan terms, any manual adjustments already made, and the date of the last deduction.

Remaining payments must be set correctly on entry

If you are entering a loan that has already been partially repaid outside the system, set Remaining Payments to the actual number of installments left — not the original total.

6.5.2 Loan Deduction in Payroll

When payroll is computed, the system automatically deducts payment_amount from the employee's net pay for each active loan. After each payroll close, remaining_payments decrements by 1. When it reaches 0, the loan is automatically marked inactive.

6.6 Vacations

The Vacations sub-module records approved vacation periods for each employee. Vacation entries affect the Cronograma and payroll deductions.

6.6.1 Recording a Vacation Period

Navigate to HR > Employees > select employee > Vacations tab > + Add Vacation.

Field	Required?	Description
Start Date	Required	First day of the vacation period.
End Date	Required	Last day of the vacation period (inclusive).
Notes	Optional	Any relevant context (e.g., "Return on 01/04/26", reason for leave, approver name).

Vacation entitlement tracking

The system records vacation periods but does not automatically calculate remaining vacation days based on seniority. Use the Notes field to document days used and balance remaining per Dominican labor law.

6.7 Salary History

Every time an employee's salary changes, the change should be recorded in the Salary History sub-module. This creates an auditable timeline of compensation changes.

6.7.1 Recording a Salary Change

Navigate to HR > Employees > select employee > Salary History tab > + Add Record.

Field	Required?	Description
Effective Date	Required	The date the new salary takes effect (typically the start of a new pay period).
Salary	Required	The new salary amount in DOP per pay period.
Notes	Recommended	Reason for the change (e.g., "Annual adjustment", "Promotion to Supervisor", "Minimum wage compliance").

Update the employee record too

Adding a salary history entry does NOT automatically update the current salary on the employee's main profile. After saving the history record, go back to the employee's main profile and update the Salary field there as well. Both must be kept in sync manually.

6.8 Incidents

The Incidents sub-module is used to document disciplinary events, workplace accidents, performance issues, or any other HR incident requiring a formal record.

6.8.1 Recording an Incident

Navigate to HR > Employees > select employee > Incidents tab > + New Incident.

Field	Required?	Description
Incident Date	Required	The date the incident occurred.
Description	Required	A factual description of what happened. Be specific — this record may be referenced in labor proceedings.
Severity	Optional	The assessed severity level (e.g., Minor, Moderate, Serious). Free text.

Field	Required?	Description
Resolution	Optional	How the incident was resolved, including any disciplinary action, date of resolution, and person responsible.

No incidents currently recorded

The system has zero incident records at this time. It is recommended to document any past incidents retroactively if relevant written records exist.

6.9 Payroll Periods and Payroll Processing

Payroll is processed bi-monthly — twice per month, covering the 1st–15th and 16th–last day of each month. Each period must be created, worked, and then closed in sequence.

6.9.1 Payroll Period Structure

Navigate to HR > Payroll Periods. The list shows all periods with their status:

Period	Status
Jan 1–15, 2026	Closed
Jan 16–31, 2026	Closed
Feb 1–15, 2026	Closed
Feb 16–28, 2026	Closed
Mar 1–15, 2026	Closed
Mar 16–31, 2026	Open (current)

⚠ **All periods currently show is_current = true**

A known data issue: all six payroll periods have the is_current flag set to true simultaneously. Until this is corrected by an administrator, use the period Status field (open/closed) to identify the active period rather than the is_current indicator.

6.9.2 Creating a New Payroll Period

Navigate to HR > Payroll Periods > + New Period.

Field	Required?	Description
Period Name	Required	A descriptive label (e.g., "March 16–31, 2026").

Field	Required?	Description
Start Date	Required	First day of the pay period.
End Date	Required	Last day of the pay period.
Status	Auto	Defaults to Open.

6.9.3 Computing Payroll

Once all timesheets are complete for a period, navigate to the period detail view and click Compute Payroll. The system calculates a payroll snapshot for each active employee using the following components:

Component	Calculation
Base Pay	Employee's current salary (from employee profile).
Overtime Pay	Hours worked beyond the standard shift × overtime rate.
Holiday Pay	Hours worked on holidays × holiday premium rate.
Sunday Pay	Hours worked on Sundays × Sunday premium rate.
Total Benefits	Sum of all recurring benefits assigned to the employee for this period.
TSS (Social Security)	Statutory deduction — employee's share of social security contributions.
ISR (Income Tax)	Statutory income tax withholding based on gross pay bracket.
Loan Deduction	Sum of payment_amount for all active loans.
Absence Deduction	Calculated from days marked Is Absent in the timesheet.
Vacation Deduction	Applied for periods where vacation days reduce payable working days.
Gross Pay (=)	Base Pay + Overtime + Holiday + Sunday + Total Benefits
Net Pay (=)	Gross Pay − TSS − ISR − Loan Deductions − Absence Deductions − Vacation Deductions

Payroll snapshots are point-in-time records

Once a payroll snapshot is saved, it captures the salary, benefits, and deductions at that moment. Subsequent changes do not retroactively affect closed snapshots. Always verify all inputs before finalizing a period.

6.9.4 Reviewing and Adjusting Before Close

After computing payroll, review each employee's snapshot before closing the period:

1. Navigate to HR > Payroll Periods > select the period > Payroll tab.
2. Review each row for unusual gross or net pay figures.
3. To adjust a benefit amount for this period only, click the employee row and edit the Period Benefits section.
4. If timesheet corrections are needed, go back to HR > Timesheets, make corrections, and recompute payroll.

6.9.5 Closing a Payroll Period

Once all snapshots are verified, click Close Period. A closed period:

- Locks all timesheet entries for that period (read-only).
- Freezes all payroll snapshots (read-only).
- Decrements remaining payments on all active loans.
- Cannot be reopened without administrator intervention.

Payroll and the accounting module

Closing a payroll period does NOT automatically create an accounting transaction for the total wages paid. You must create the payroll transaction manually in Accounting > Transactions (see Chapter 4): Direction = Purchase, Account = Salaries & Wages, amount = total net pay for the period.

6.10 Jornalero Registry

The Jornalero Registry maintains identity records for recurring day workers. There are currently 8 registered jornaleros (6 active, 2 inactive).

6.10.1 Registering a Jornalero

Navigate to HR > Jornaleros > + New Jornalero.

Field	Required?	Description
Full Name	Required	Worker's full legal name.
Cédula	Required	Dominican national ID. Must be unique in the registry.
Is Active	Required	Defaults to active. Deactivate if the worker is no longer available.

Jornalero vs. employee

Jornaleros are day workers paid per task or day through the Day Labor module (Chapter 5, Section 5.7). They are not on the permanent payroll and do not appear in the Timesheets or Payroll modules.

6.11 Employee Documents

The Documents sub-module stores scanned copies of employee identification, contracts, medical certificates, and any other required paperwork.

6.11.1 Uploading a Document

Navigate to HR > Employees > select employee > Documents tab > + Upload Document.

Field	Required?	Description
Document Name	Required	A descriptive filename (e.g., "Cédula Juan Pérez", "Contrato de trabajo 2025").
File	Required	Upload the file. Supported types: PDF, JPG, PNG. Maximum 10 MB.
Notes	Optional	Any relevant context (expiration date, issuing authority, etc.).

Document types currently stored

The system currently has 2 uploaded documents: one PDF (cédula scan) and one JPEG image. It is recommended to upload at minimum the cédula scan for every active employee. Employment contracts, TSS enrollment forms, and bank account confirmation letters are also worth archiving here.

6.12 Common Scenarios

Scenario	How to handle it
New employee starts	Create employee profile (Section 6.2.2). Add recurring benefits. Record initial salary in Salary History. Begin entering timesheets from first day of their first payroll period.
Employee requests a salary advance	Create a loan record (Section 6.5.1). Set payment amount and number of installments. The deduction will apply automatically starting from the next payroll computation.
Employee goes on vacation	Record the vacation period (Section 6.6.1). Mark corresponding days as Is Vacation in the Cronograma.

Scenario	How to handle it
Employee salary increase	Update the Salary field on the employee profile. Also add a record in Salary History (Section 6.7.1) with the effective date and reason. Both steps are required.
Employee misses work	Mark the timesheet cell as Is Absent. The payroll engine applies the absence deduction automatically. Add a note explaining the reason.
Public holiday falls in pay period	Mark affected timesheet cells as Is Holiday. Also mark the Cronograma.
Period closes but loan still active	No action needed — the system automatically decrements remaining_payments and continues deducting until the loan is paid off.
Employee terminates	Deactivate the employee record with the date of termination (Section 6.2.4). Process their final payroll period. Create any severance payment as an accounting transaction.
